PPS-info

General

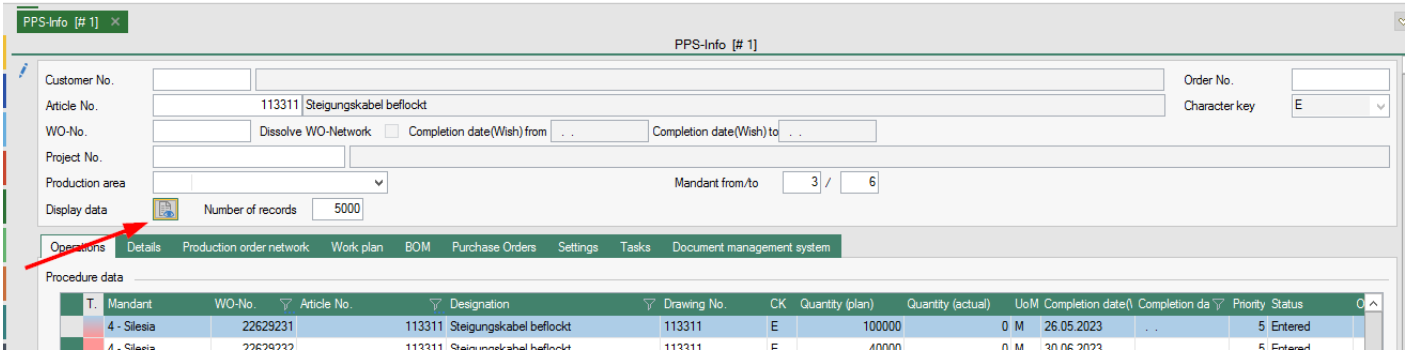

This function provides extensive information about the production area. In the Settings tab, you make a preselection of which data should be displayed. This can be saved.

FEPA function: `Production > PPS Info`

All fields in the upper part of the window offer selection options to limit the data display.

The button "Display data" displays all production orders for preselection.

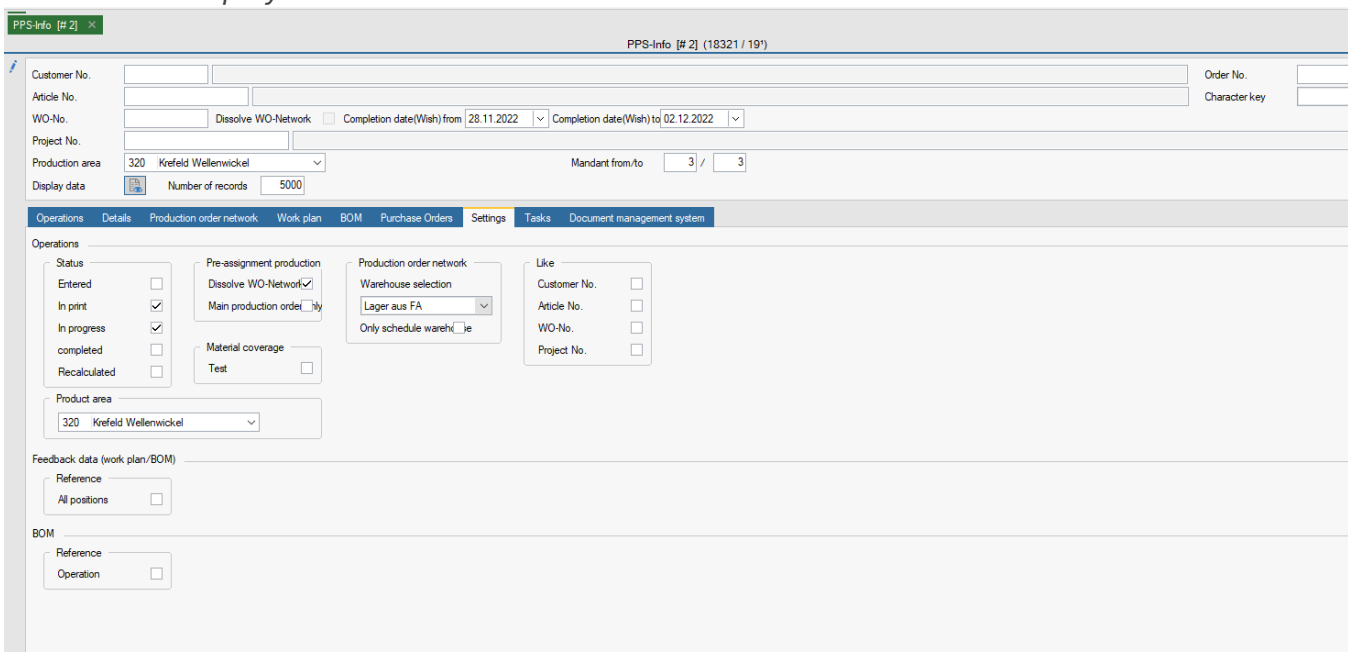

Weekly overview via PPS-info / settings

In the PPS info you can display all production orders (WO). In the settings you can define for yourself what you want to be displayed. With the check mark in the tool bar you can save your own settings.

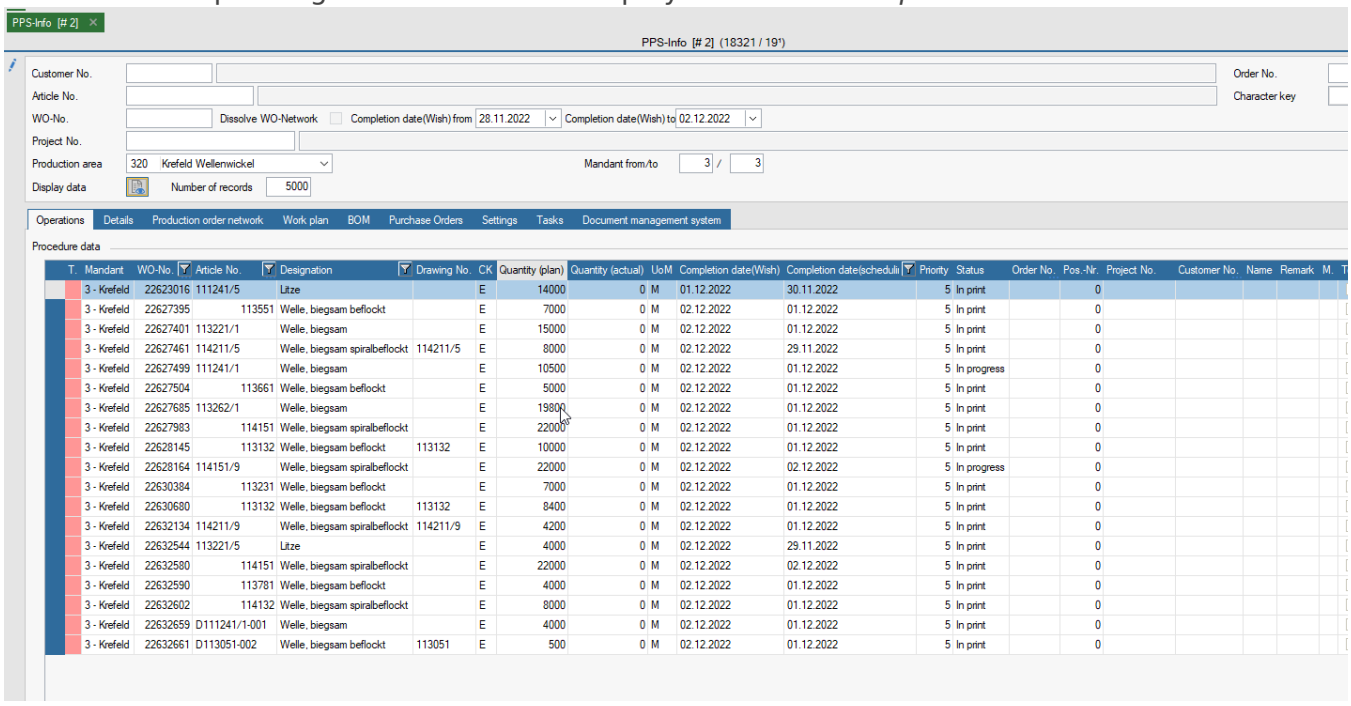

If the scheduling was used and all WO are fine planned, a weekly overview of the WO of the current calendar week can be made as follows.

Filtering:

1. Settings tab: Only check the box for *In print* and *in process.* (if necessary, select your own *product area*)
2. enter *Completion date(wish) from* until *to* date from e.g. Monday to Friday of the calendar week.
3. field: enter client from "*n*" to "*n*".
4. Click on the *Display data* button.

5. now the corresponding calendar week is displayed on the tab *Operations*.
