Reporting

General

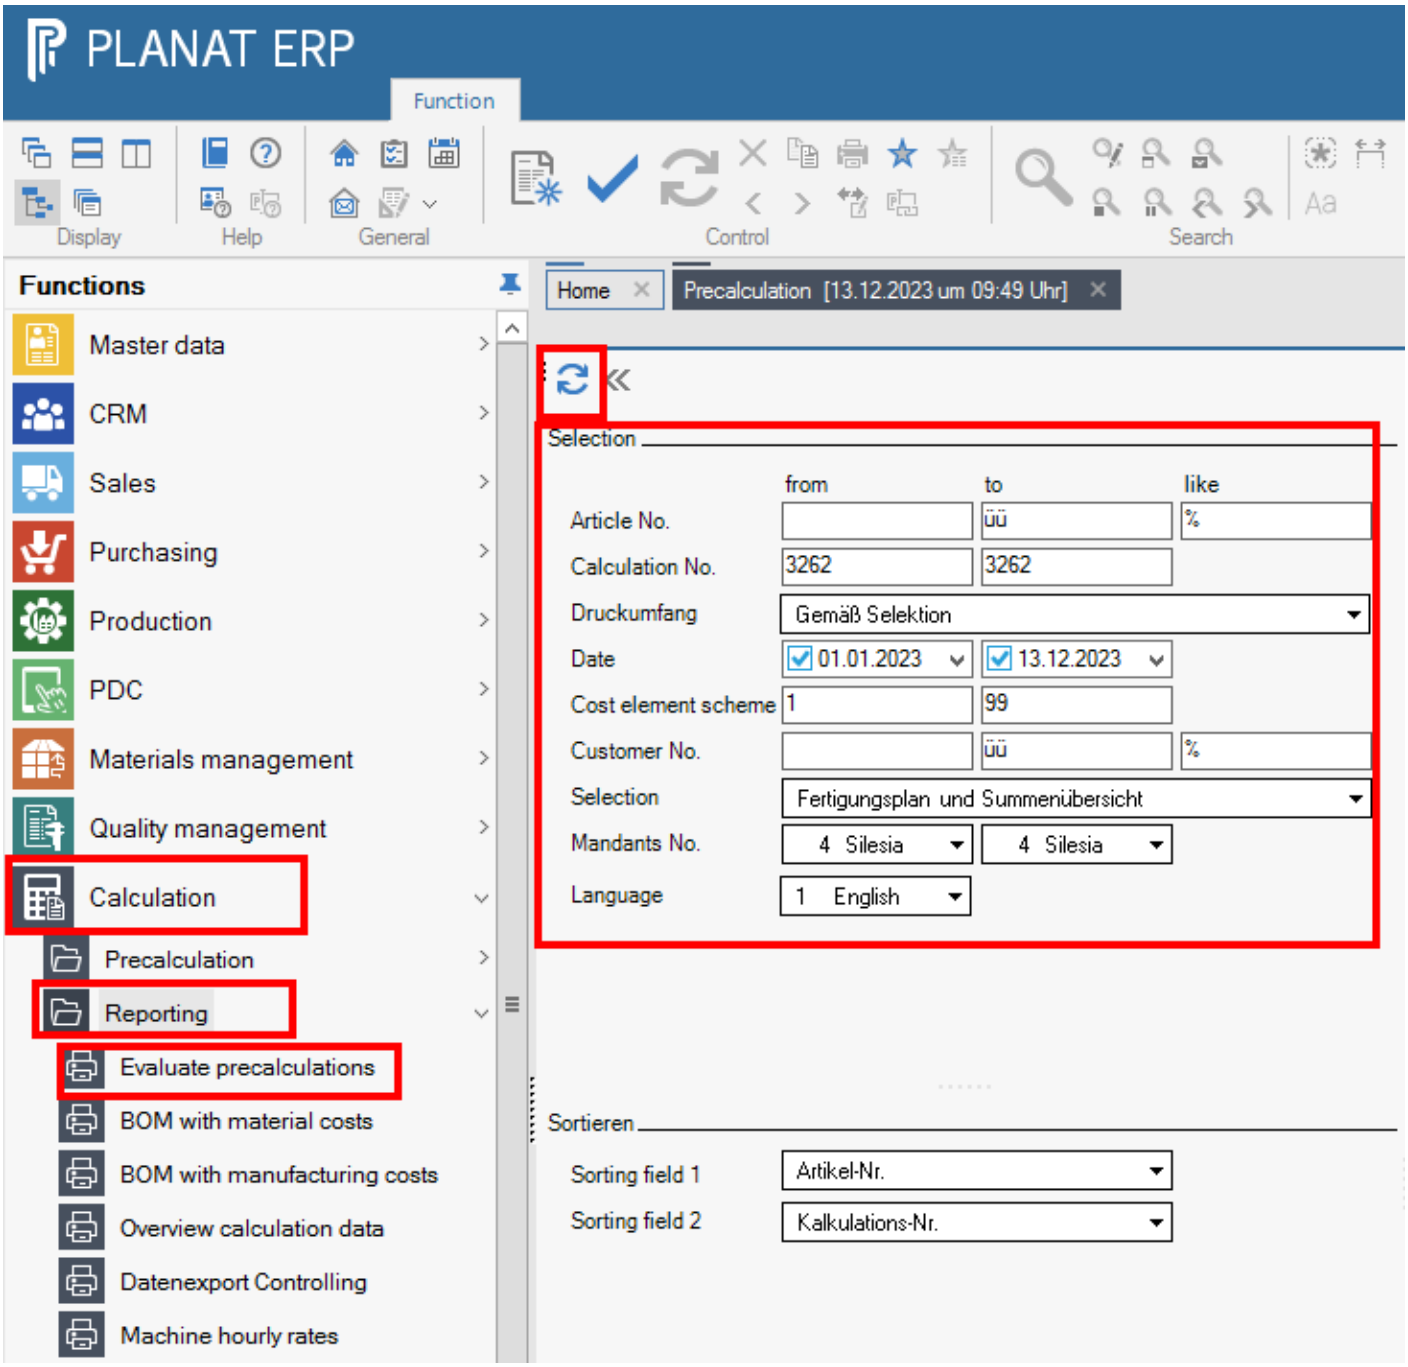

Only the tables can be transferred to Excel via the display of the calculations. However, the header data for the cost estimate, such as article number, lot size, cost element scheme, etc. are missing here.

Evaluate precalculations

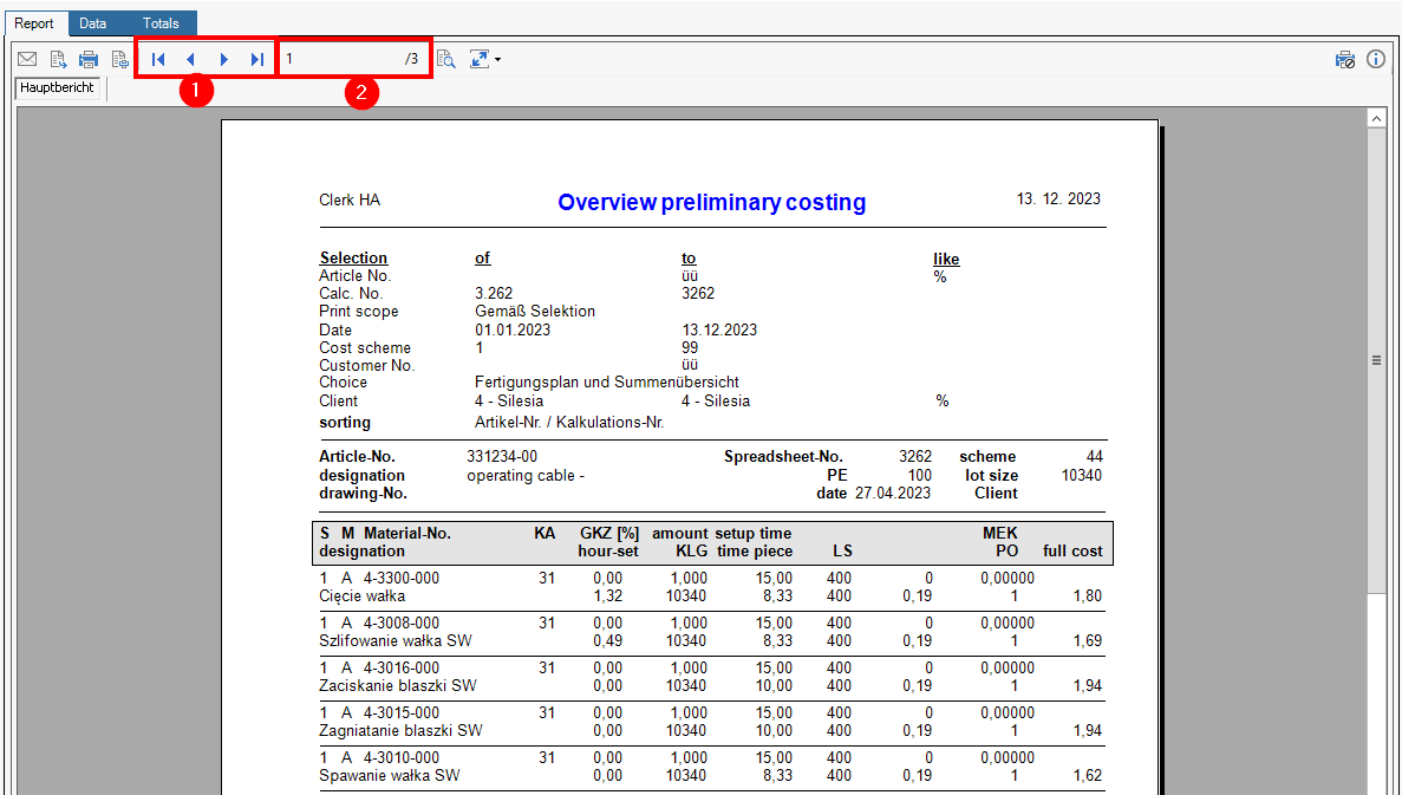

In FEPA under the function `Calculation > Reporting > Evaluate precalculation` is the report, which can also be exported to a PDF.

I can restrict the result via the selection. The data refers to the information stored in the cost estimates.

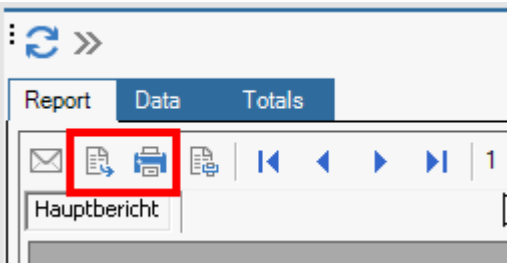

e.g. - a specific calculation that you have created, enter/select selection criteria and press the "Update" button

A report is generated. Page one begins with the work plan data, followed by the totals overview. Area 1 is used to scroll through the pages. Area 2 is the page display.

The document can be exported to a PDF via the export button, alternatively it can also be printed on our PDF printer. The setting is made via the printer symbol directly next to it.

In the other views, you will find the item data of the calculation (Data tab) and the totals data (Totals tab), which can be exported individually to an Excel sheet using the right mouse button.
